

gigaaa AI Personal Assistant gives voice control to smart homes

Luxembourg - **gigaaa**, the new multilingual AI Personal Assistant, unveils its newest solutions for smart home systems and customer service, devices like watches, mirrors or loudspeakers, websites or mobile apps at **imm cologne 2020**, taking place on 13.-19. January 2020. From helping with everyday tasks to creating a better home environment, the products being introduced are all about using the latest technology to make one's life easier through simple voice commands. With *gigaaa Inside*, gigaaa grants people access to smart home automation and a wide range of digital services through voice. At **imm cologne**, gigaaa presents smart mirrors, smart loudspeakers, and smart watches with *gigaaa Inside*.

In **Let's be smart - Smart Village at imm cologne**, gigaaa for the first time introduces its Plug-in solution which integrates conversational AI to websites and mobile applications, allowing businesses to create custom voice services for their target audience through various no-code tools with gigaaa Developer Console.

"It has never been easier to build voice services like with gigaaa Developer Console. Within minutes you can add a voice assistant to your website or mobile app and develop your own Voice Service for Customer Support, Claim management, E-Commerce or FAQs With the gigaaa Plug-in can anyone make their website or mobile app intelligent." - said Dragan Alexander Stevanovic, the CEO of gigaaa.

gigaaa AI Personal Assistant is device-independent, thus can be integrated into numerous systems and devices. A hotel can offer its guests a smart mirror with *gigaaa Inside*, along with a number of digital services related to travel, such as sightseeing tips, navigation, nearby restaurants and many other voice services to enhance their customer experience. Moreover, the entire room can become smart by allowing guests to take control with simple voice commands to turn off the lights, increase the temperature or lock the door. Similarly, a TV, a loudspeaker or any other device can be brought to life with voice. These smart elements will define the future of **interior design**.

About

gigaaa is a multilingual AI Personal Assistant that enriches people's lives by making their everyday tasks simpler. The system represents a new alternative in a market dominated by Google Assistant and Amazon Alexa, both for enterprises and consumers. gigaaa provides personalized assistance according to people's interests, requests and needs. All searches and services are accessible through voice commands. Currently, gigaaa AI Personal Assistant is available in German, English, Turkish, Russian, Spanish and Arabic with many more languages coming in the next months.
